LONG TRAVEL SOLUTIONS | CARRIAGE SYSTEM

DRUM STYLE CARRIAGE SUPPORT SYSTEM

A Drum Style carriage support system is available for long travel applications when the cable/hose load and travel exceed the limits available with fixed support rollers. Carriage support systems consist of a moving framework that has major rollers (Drums) at each end and intermediate conveyor supports between the major rollers, which support the cable carrier for the complete length of travel. The entire system rolls on “c”-channels on the floor (or a bridge). Single carrier carriage systems require a return cable assembly. For use with metal carriers only.

Features/Benefits:
• Robust-designed for heavy-duty operation with steel carriers
• Modular: Easy to add/remove length
• Easy assembly: Most components are bolted together
